

BURGOPAK

- Packaging Range -

PACKAGING FOR BETTER.

We believe that packaging has a bright future. That responsible doesn't mean dull and premium doesn't mean over-packaged. We believe that with the right approach you can innovate responsibly.

Our 'packaging for better' mission is aimed at making continual improvements to all areas of our products. From the way they are designed to the materials used and the way they are manufactured, we aim to make good design not only affordable but a valuable and responsible investment.

Our manifesto also extends way beyond our products and speaks of our commitment to doing business the right way; forming better relationships, tighter and more collaborative supply-chains, maintaining a transparent process and keeping everybody up to date throughout.

We pride ourselves on our personal service, with a dedicated Project Manager assigned to every project. Our Designers and Artworkers are also on-hand to advise and collaborate with your team to ensure the end result is, well, better than expected.

Fully recyclable paper based packaging

Responsibly sourced paper as standard. FSC™ certification on request

Optimised & self-mailer options using less material

Carbon calculator to assess relative impact

About this brochure

Navigation

On the next page you will find an interactive menu. Click on your preferred mechanism and you will jump to the relevant page. Or feel free to leaf through as preferred. There's a button on each page to take you back to the menu. When you find something you like, click the sample request button to begin an email request.

Selecting Options

There are usually a number of different options within each mechanism type. We have tried to call out key features & benefits for each one to help you choose the right pack for you. And although we like to stick to the standard sizes and designs, customisation is possible. If you would like further guidance, please do contact us using the 'Request Sample' button.

Tiering

A number of different options are available for most mechanisms in our range. These generally span a range of cost/value-add considerations. If you are launching products at different tiers, why not consider choosing a 'good-better-best' option of the same format in order to create alignment through the range while differentiating the tiers.

Timings & Process

Each project is different and when it comes to things like design process, timings and specifications, our team will be able to guide you through. As a general rule, from receipt of the purchase order, production time is usually around 4-6wks and delivery from 2-6wks depending on locations, mode of transport, size of order etc.

For further information or for any other questions, please contact your dedicated project manager or try the button below.

Above: The two packs designed for Curve show how very different 'value-add' propositions can be achieved using the same mechanism but changing subtle details. This is a great strategy for building tiers into a product range.

Mechanisms/ Contents

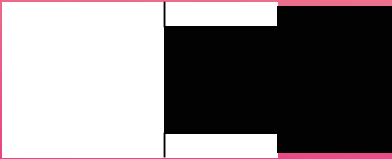

Click on your preferred format from the list below.

Coupé (CP)

Slider (SL)

Cabrio (CA)

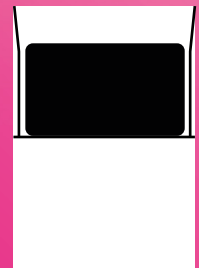

Telescopic (TE)

Revolver (RV)

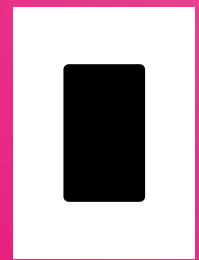

Ejector (EJ)

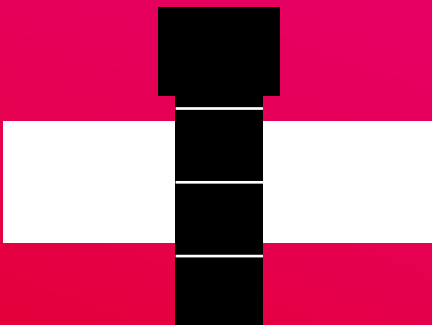

Lifter (LI)

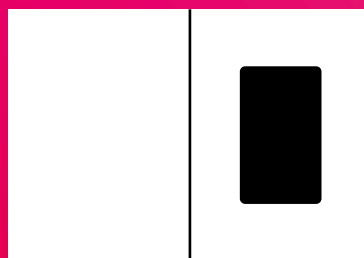

Split (SP)

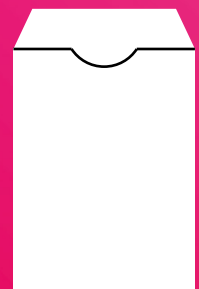

Monolith (MO)

Rotor (RO)

Book (BK)

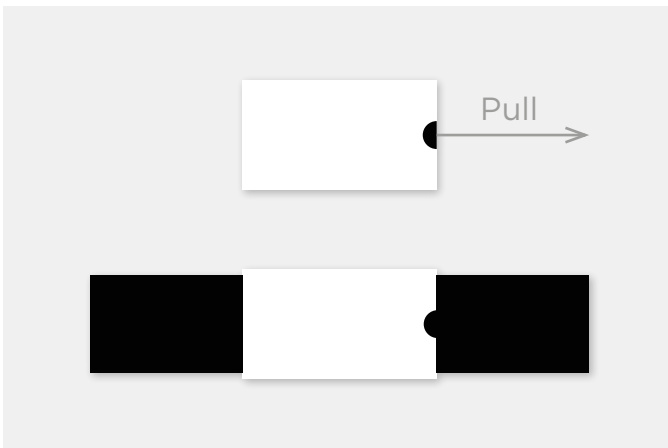

Mailer (MA)

Model: SL-R1

Slider (SL)

Model: SL-S4

A stand-out favourite among fintechs and health-tech companies alike, this iconic design has helped launch countless brands into the stratosphere.

Available in a range of options for product types from bank cards to test kits with tiering available from material-saving options to premium, value-add propositions.

NOTE: This format will require an additional mailer/envelope if sending in the post.

Book (BK)

The Burgopak Book format is a simple yet elegant solution for presenting new cards to customers.

Available in different thicknesses to offer tiering through a product range. This design is paper-based and fully recyclable.

NOTE: This format will require an additional mailer/envelope if sending in the post.

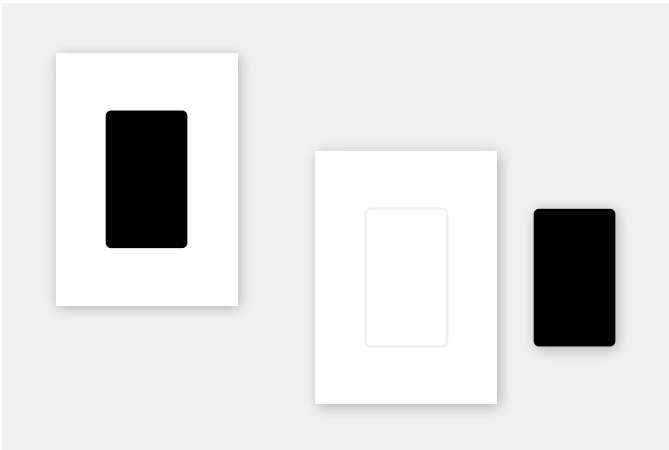

Model: BK-A62 (custom)

Model: MO-A62 (custom)

[See Models](#)

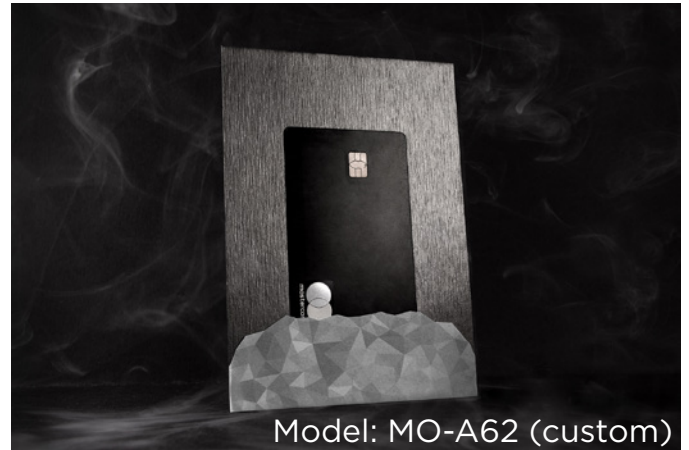

[Back to Menu](#)

Monolith (MO)

The Monolith format shares much the same structure as our range of book packs but with the front panel removed. This means the card is immediately visible on opening and overall, the pack uses less material.

NOTE: This format will require an additional mailer/envelope if sending in the post.

Model: MO-A62 (custom)

Model: MO-A61

Applications: Bank cards, SIM, gift cards.
Features: Card holder, A6 form-factor, less than 5mm thick.

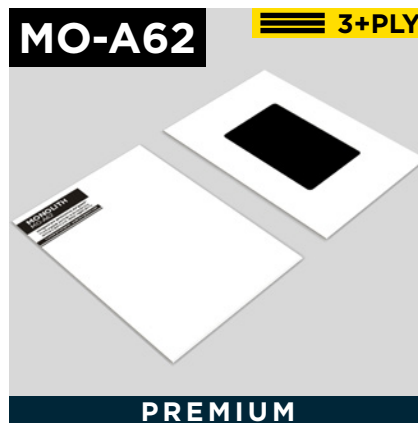

Dims (closed): 148x105x2mm
Applications: Bank cards, SIM, gift cards.
Features: Metal card holder, A6 form-factor, less than 5mm thick, extra material for premium feel.

Model: LI-S0

Lifter (LI)

The Lifter is another super efficient solution that works best as a self-mailer. Lifting the front flap drives a simple mechanism that subtly raises the card out of the packaging.

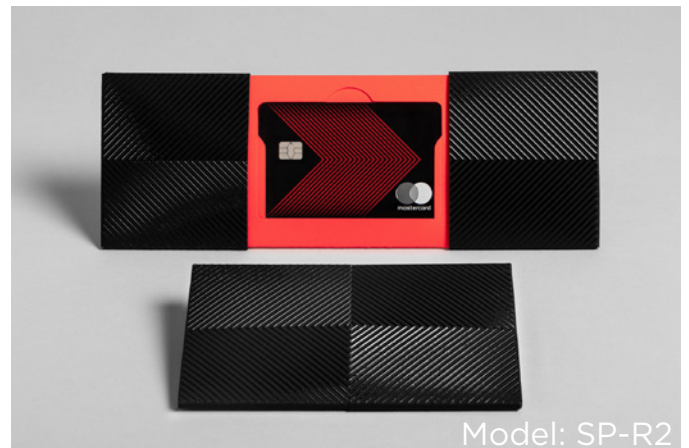

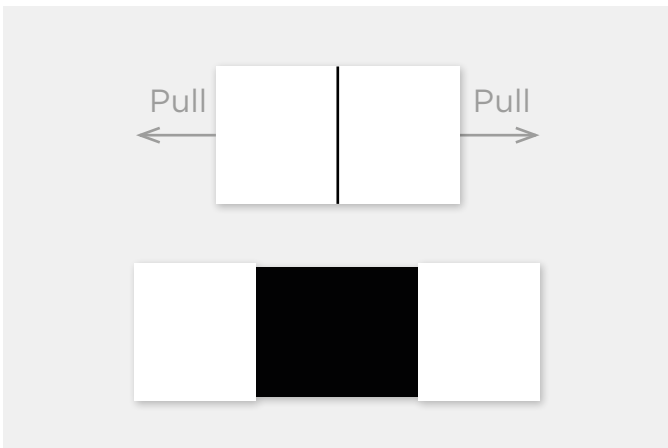

NOTE: Some options in this format will require an additional mailer/envelope if sending in the post.

Model: LI-C60

[See Models](#)

[Back to Menu](#)

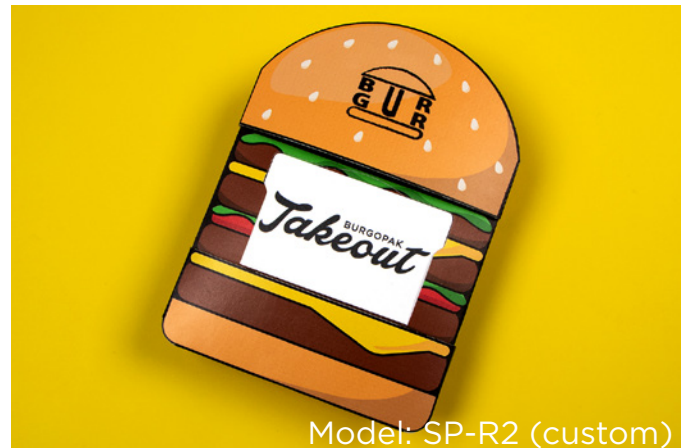

Model: SP-R2

Split (SP)

The Split pack sits proudly within our more premium tier of solutions.

Pull the sides apart and they open in a smooth, uniform fashion (at exactly the same time) to reveal the card. No clunky opening experience here!

NOTE: This format will require an additional mailer/envelope if sending in the post.

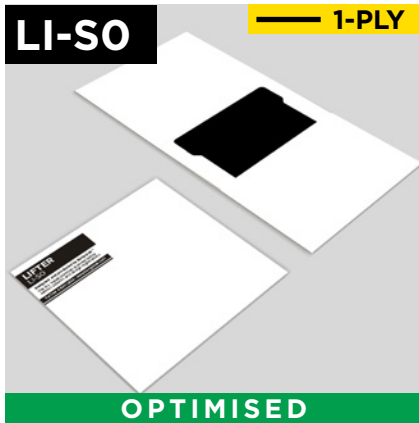

Model: SP-R2 (custom)

Model: RV-A61 (custom)

Revolver (RV)

The Revolver is a wonder of cardboard engineering. It opens like a book but the motion also drives a rotating platform containing the hero product. Magic!

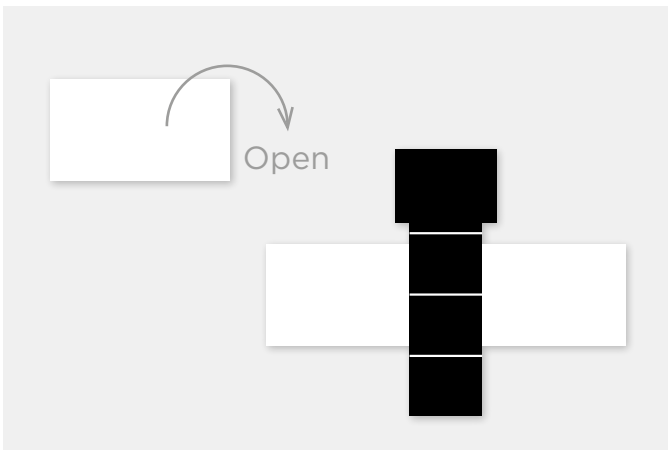

NOTE: This format will require an additional mailer/envelope if sending in the post.

Model: RV-A61 (custom)

[See Models](#)

[Back to Menu](#)

Model: RO-A61

Rotor (RO)

The Rotor is the ultimate Instagram marketing weapon. Subtle it is not and will be sure to turn heads with the way it spins and unfolds as the pack is opened.

This is definitely the choice for those looking to make a splash and where paired-back and refined are NOT on the agenda.

NOTE: This format will require an additional mailer/envelope if sending in the post.

Model: MA-1

Mailer (MA)

Our mailers provide a layer of protection and security for packs that don't have an integrated seal & tear strip. They are usually made from the same material as the pack and include a double-sided tape to seal the mailer with a perforated tear-strip for a more enjoyable opening experience.

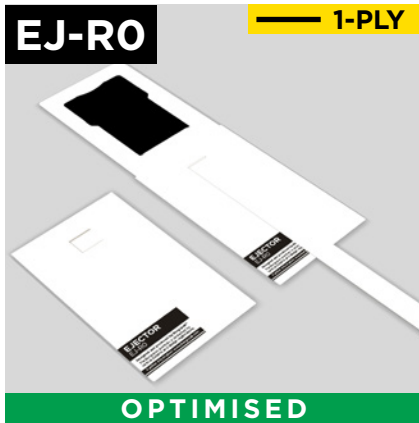

NOTE: Mailers may be quoted separately. Please be sure to ask for further details.

Applications: Bank cards, SIM, gift cards.
Features: Card holder, reduced materials, rectangular form-factor, less than 5mm thick.

Dims (closed): 162x114x2mm
Applications: Bank cards, SIM, gift cards.
Features: Card holder, reduced materials, peel & seal, compatible with automated post.

Mailer - Models

Dims (closed): 170x125x1mm
Applications: For use with all non-self-mailer packs except those with a deep tray (3).
Features: Peel and seal, usually made from same material as pack.

Dims (closed): 174x143x1mm
Applications: For use with packs that have a deep tray (3).
Features: Peel and seal, usually made from same material as pack.

Frequently Asked Questions

Can I have a custom design?

All of the packs within our range are adaptable. It is possible to change the size, add diecuts, ribbons and other flourishes to set your design apart. However, it is important to factor this into your timeline. We will generally undertake a round of design work plus a round of amends to one design FOC. Beyond that, we may need to levy a small fee.

Where do you manufacture?

We have manufacturing in the UK, Poland, Czech Rep, Ukraine, USA, China and India.

How long does the design process take?

We always recommend sticking to one of our standard design if time is tight. For custom designs, the time can vary wildly depending on the complexity of the brief. It's usually best to discuss options with your project manager as soon as possible.

What are your production lead-times?

From receipt of the purchase order and artwork approval, production time is usually around 4-6wks if using standard materials. Delivery is typically 2-6wks depending on locations, mode of transport, size of order etc.

What certifications do your plants hold?

Collectively, our manufacturing locations hold the following certification: REACH, FSC™, PEFC, BRC, SEDEX ISO9001, ISO14001, ISO22000, ISO18001, ISO45001, SA8000, PS9000. Certification copies are available on request. If you have a specific requirement, please contact your designated project manager.

How much does your packaging cost?

We have created packaging to work across a wide range of budgets. If you have a specific budget, please contact your designated project manager, who will be able to assist you in understanding what is possible within your budget.

What is your MOQ?

Our typical minimum order quantity is 1000 units but this can depend on the design.

Is your packaging recyclable?

Yes. And although some of our designs are powered by a super thin plastic band, this does not affect them being recycled. The band is simply separated during the repulping process.

Can we use recycled card?

Using recycled paper is possible when producing within Europe but it may be subject to longer lead-times, be more expensive or of a lower quality. Our general recommendation is to use paper from responsibly managed forests and we have worked hard to standardise this throughout our supply chain. For additional peace of mind we can also offer FSC™ certified stock on request.

What is FSC™ certified paper?

FSC™ (Forest Stewardship Council®) is an independent organisation that audits the sustainable management of forests and wood-based products. FSC™ certified paper generally uses virgin pulp made from trees that come from responsibly managed, sustainable sources. It is available as an option on all standard materials from our global production sites as well as on a wide-range of specialist papers.

What inks and finishes should I use?

Our general recommendations are:

- Use aqueous varnish instead of laminate.
- Less than 50% coverage for foil & spot UV.
- Use water or vegetable-based inks.

Can you help ship my packaging?

Yes. An estimate can be provided once we have finalised the design, final volume requirement and have the final delivery address and required mode of transportation. Your PM will be able to advise further on timings, terms, etc.

Can you do the graphic design?

Generally speaking, no. However, our artwork team are there to help setup artwork for print and can advise on colours, finishes and specifications to ensure you're packaging arrives as expected.
